It's all about people.
Let's design products
they love.

Senior Security Engineer (m/f/x)

Hamburg

Full-time employee

Professional/Experienced

70 - 110 K

4,4

Your tasks:

- Being the first point of contact at New Work for security-related questions and incidents

- Building up and extending our SIEM

- Creating use cases, rulesets and playbooks for incident response

- Advising teams during new projects, help them to understand risks, and suggest mitigations.

- You'll set up monitoring processes to help us detect attacks.

- You'll help us manage incidents that could affect security.

- Working together with a variety of internal teams to resolve incidents

Your skills:

- You've received training or a degree in IT, software development or similar, and have several years of security experience.

- Your analysis is thorough, and your advise is clear,

practical, and understandable for people with technical and non-technical background.

- You're well-versed in Linux and well connected within the security community.

- You understand code and ideally have some background in web development or system administration.

- If you are familiar with Amazon Web Services (AWS) and related security configurations and management, that would be a plus.

- Proven network or application security skills would also be a bonus.

- Fluency in English is required. Ideally you speak German as well.
